Solar panels help with reducing air pollution. Their use to produce electricity reduces the need for power generation from fossil fuels which are a major air pollutants.

Solar panels don't produce any emissions or toxins themselves which makes them a very clean source of energy. Using them lowers CO2 with 27%.

Benefits of bikes for the environment.

1. Doesn't consume combustibles.
2. Doesn't emit greenhouse gases.
3. It produces less noise than cars.
4. You can reuse them.

**Using electric bikes
instead of cars is a great
way to reduce pollution**

Agriculture is responsible about 10% of CO2 emission

For reducing agriculture avoid overconsumption and waste

Hydropower is form of green energy that harnesses the power of moving water to generate electricity.

Benefits to hydropower:

It is a clean energy source that produce no air pollution or greenhouses gas emissions

It also has a high energy output relative to its size and can provide power on a consistentent basic

**LED is a highly energy-efficient
lighting technology**

**Improved Environmental
Performance
No Heat or UV Emissions**

Low Voltage Operation

**There is no use of any active
substance harmful to nature**
